## Abstrakt

StudyPad je kombinace služby pro porízkování poznámek a sociální sítě s cílem pomoci studentům zapamatovat si různé informace. Cílem práce je vyvinout aplikaci pro OS Android, která bude sloužit jako klient. Tento text uznává stávající řešení, obsahuje analýzu domén a požadavku, popis a výběr architektury aplikace a její implementace

**Klíčová slova** Android, Kotlin, MVVM

---

## Abstract

StudyPad is a combination of note-taking service and a social network, aimed to help students to memorise different pieces of information. The goal of this thesis is to develop an application for Android OS which will serve as client. This text acknowledges existing solutions, contains domain and requirements analysis, description and choice of application's architecture and its implementation

**Keywords** Android, Kotlin, MVVM

## List of Figures

---

# Introduction

StudyPad is a combination of a note-taking service and a social network. Main purpose of the app is help users memorize different pieces of information and make it easy this information easy to exchange. To allow this, user will be able to create notes, that will act a single information piece. Notes are stored in distinct sets - Notebooks.

User will be able to manage his own library of Notebooks,

# Analysis

- 1.1 System description
- 1.2 Existing solutions
- 1.3 Domain model
- 1.4 Android Platform

### 1.5 Requirements

It is important to establish all functional and non-functional requirements for StudyPad. Section bellow contains all requirements designed before the start of the development

#### 1.5.1 Functional requirements

##### User Authentication

- **F1: Registration/Login using email** Access to StudyPad is possible by creating an account using email address/password combination.
- **F2: Registration/Login using Facebook** User will be able to use his/her Facebook account to access StudyPad.
- **F3: Registration/Login using Google** User will be able to use his/her Google account to access StudyPad.
- **F4: Store OAuth token** API Authentication Token will be stored in device memory.
- **F5: Token refreshment** API Token will be refreshed when needed, so user won't have to login again.
- **F6: University selection** As a part of user registration flow, user will be able to select his/her university.

##### Library Management (Notes & Notebooks)

- **F7: Notebook creation** User will be able to create new notebooks with the name he/she choose.
- **F8: Notebook deletion** User will be able to delete existing notebooks.
- **F9: Notebook name edition** User will be able to edit notebooks names.
- **F10: Note creation** User will be able to create a note with specific title and content.
- **F11: Note edition** User will be able to edit existing note, or completely delete it.
- **F12: Show Notebooks** : User will be able to view all the notebooks he/she created.

- **F13: Show Notes:** By clicking on notebook item, user will be able to view the list of notes that are assigned to this notebook.

### Sharing Hub

- **F14: View published notebooks** User will be able to view notebooks published by other users.
- **F15: Search through published books** User will be able to search through the published notebooks by applying different filters (such as author, university and subject/topic).
- **F16: Browse through published notebook** User will be able to see notes inside the notebook that's been published.
- **F17: View comments** User will be able to view others users comments discussing a notebook that's been published.
- **F18: Leave a comment** User can comment on other user published notebook.
- **F19: Delete a comment** Application will let user to delete his/her comment.
- **F20: Save published notebook** User will be able to save published notebook to his/her library.
- **F21: Publish notebook** User will be able to publish his notebook.
- **F22: Update published notebook** Author of the published notebook will be able to update it's information.
- **F23: Delete published notebook** Author of the published notebook will be able to delete the his/her notebook from shared space.
- **F24: Share notebook** User will be able to share his notebook by generating a deep-link.

### Study Hub

- **F25: Start a basic self-check** User will be able to use an interactive way to look through his/her notes
- **F26: Start a written test** User will be able to participate in a written test based on one of notebooks to test his/her knowledge
- **F27: Start a quiz** User will be able to participate in quiz challenge that will be based on one of his/her notebooks

### Settings

- **F28: View Profile Information** User will be able to view his/her profile information such as first name, last name and his university.
- **F29: Edit Profile Information** User will be able to edit his/her profile information.
- **F30: Logout** User will be able to logout from the application.

### 1.5.2 Non-functional requirements

- **N1: Native Android application** Application will be written using native Android SDK.
- **N2: Android Version** Application minimal SDK version must be low enough to support as many devices as possible and high enough to use latest Android APIs considering other functional and non-functional requirements.
- **N3: Material Design** Application user interface will follow latest Material design guidelines and best practises.
- **N4: Scalable app architecture** Application's architecture must be scalable and easy testable.
- **N5: Tablet & Phone support** Application GUI must be well suited for multiple screen sizes.
- **N6: App Localization** Application will be able to adapt to different languages based on user locale

## 1.6 Platform-Independent Model

## **Design**

- 2.1 Wireframes**
- 2.2 Application architecture**
- 2.3 Platform-specific model**
- 2.4 Main sequence diagrams**

# Implementation

- 3.1 Choice of technologies
- 3.2 Component diagram
- 3.3 Installation

# Testing

---

## Conclusion

## Acronyms

**GUI** Graphical user interface

**XML** Extensible markup language
